On Perseverance

The more one quiets the mind, an inner shift begins to occur. Which assists ideas of a loftier nature, so they can enter conscious awareness. The act of slowing the breath, accompanied by mental focus. Gradually dissolving that which stands as an impediment to inner peace. With each thought, one draws from the vault of memory. Ingrained images and dreams, forming the foundation one seeks to expand upon. Through continual effort, a vision begins to take shape. With every moment one dedicates to the pursuit. A new avenue of possibility begins to emerge. The refinement of personal insight, leading to an expansion of awareness. Although it may take some time for these gifts to bear fruit. The investment of time and effort; will eventually contribute to an abundant state of mind. So long as the will to persevere remains unshaken, no worldly obstacle shall undermine one's ambitions.

A mindset that is indifferent to life's struggles. Regardless of how daunting the future may appear. To accept a situation that is beyond one's control. Although difficult, helps an individual build a more resilient nature. The countless trials and tribulations of this world, acting as a catalyst for internal growth. So long as the will to endure, doesn't fall victim to life's tumultuous nature. A mind that's focused and unwavering in its approach to achieving a positive outcome. With ample time to pursue a goal of personal significance. A will that's undeterred by setbacks, shall reduce a daunting task to one that is manageable. The key to accomplishing what appears unattainable, is to remain grounded. To accept a situation for what it is and to decide upon a course of action; having considered the information at hand.

To not only recognize why a certain outcome has failed to produce a positive result; but to adjust the goal in accordance with a realistic outcome. Through a process of trial and error, one should be able to smooth out the rough edges of a problem.

Learning from each attempt and changing the approach where necessary. The extent to which change is adopted, influencing the final result. By learning from the mistakes of one's previous efforts. An individual gains enough experience to refine the process. The setbacks of previous endeavours, serving as a catalyst for the next undertaking. With each attempt, broadening the range of an individual's skillset. With an undeterred goal of improving upon yesterday's efforts. An individual should be able to see a gradual improvement over the course of many months and years. So long as one is undaunted by the prospect of failure; it then becomes a matter of maintaining the motivation to forge ahead.
